

# Economizer

Global Boiler Services has extensive experience in designing, manufacturing and installation of various types of tube sections for the major OEM economizers.

Global Boiler Services can supply most types of finned economizer tubes: single “H”-finned, double “H”-finned, and spiral-finned.

Older types of coiled plain tube economizers can also be supplied to customer-specific dimensions.

Global Boiler Services builds on a long and well-reputed background in the industry with all key service employees having more than 20 years of individual background in construction, manufacture and repairs of boilers.

By choosing Global Boiler Services, you are ensured that all repairs are Class certified regardless of the type of tubes needed, finned or coiled.
